Infection growth rate

MICHIGAN

On average, each person in Michigan with COVID is infecting 0.82 other people. Because each person is infecting less than one other person, the total number of cases in Michigan is shrinking.

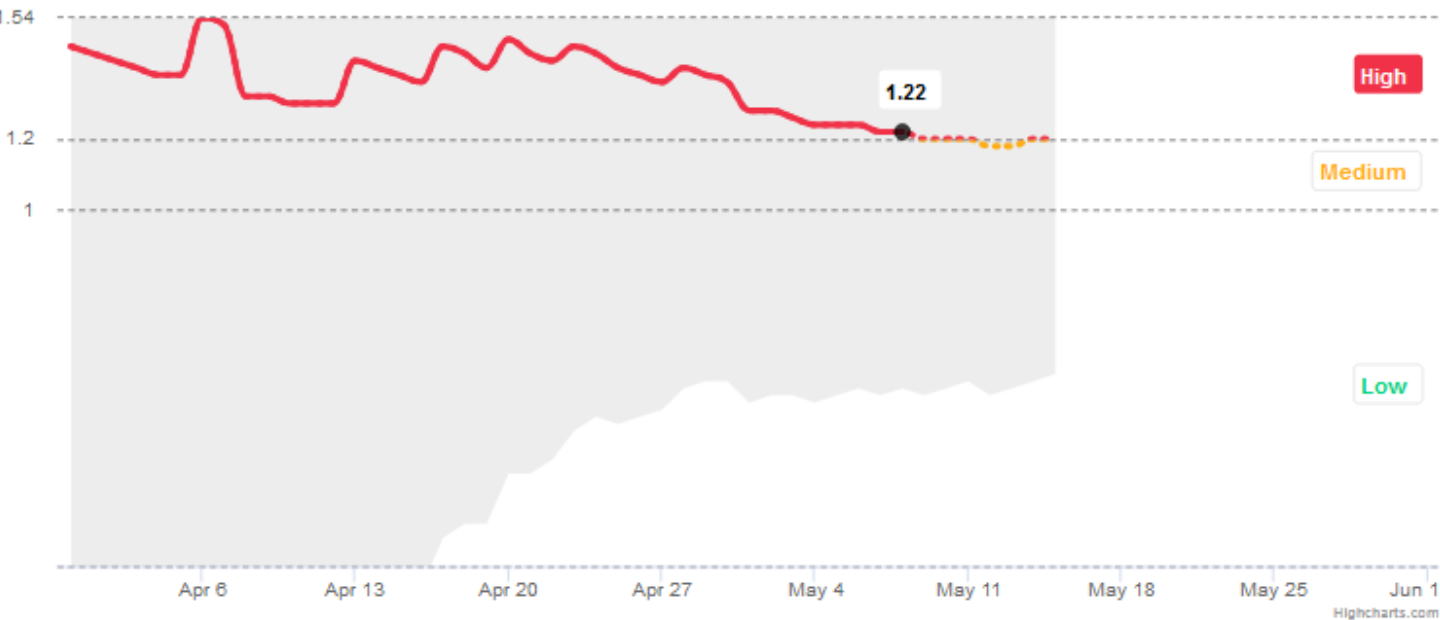

Last updated 5/17/2020. Most experts recommend an infection rate of less than 1.0 for two

Infection growth rate

ALLEGAN COUNTY, MICHIGAN

On average, each person in Allegan County, Michigan with COVID is infecting 1.22 other people. As such, the total number of cases in Allegan County, Michigan is growing exponentially.

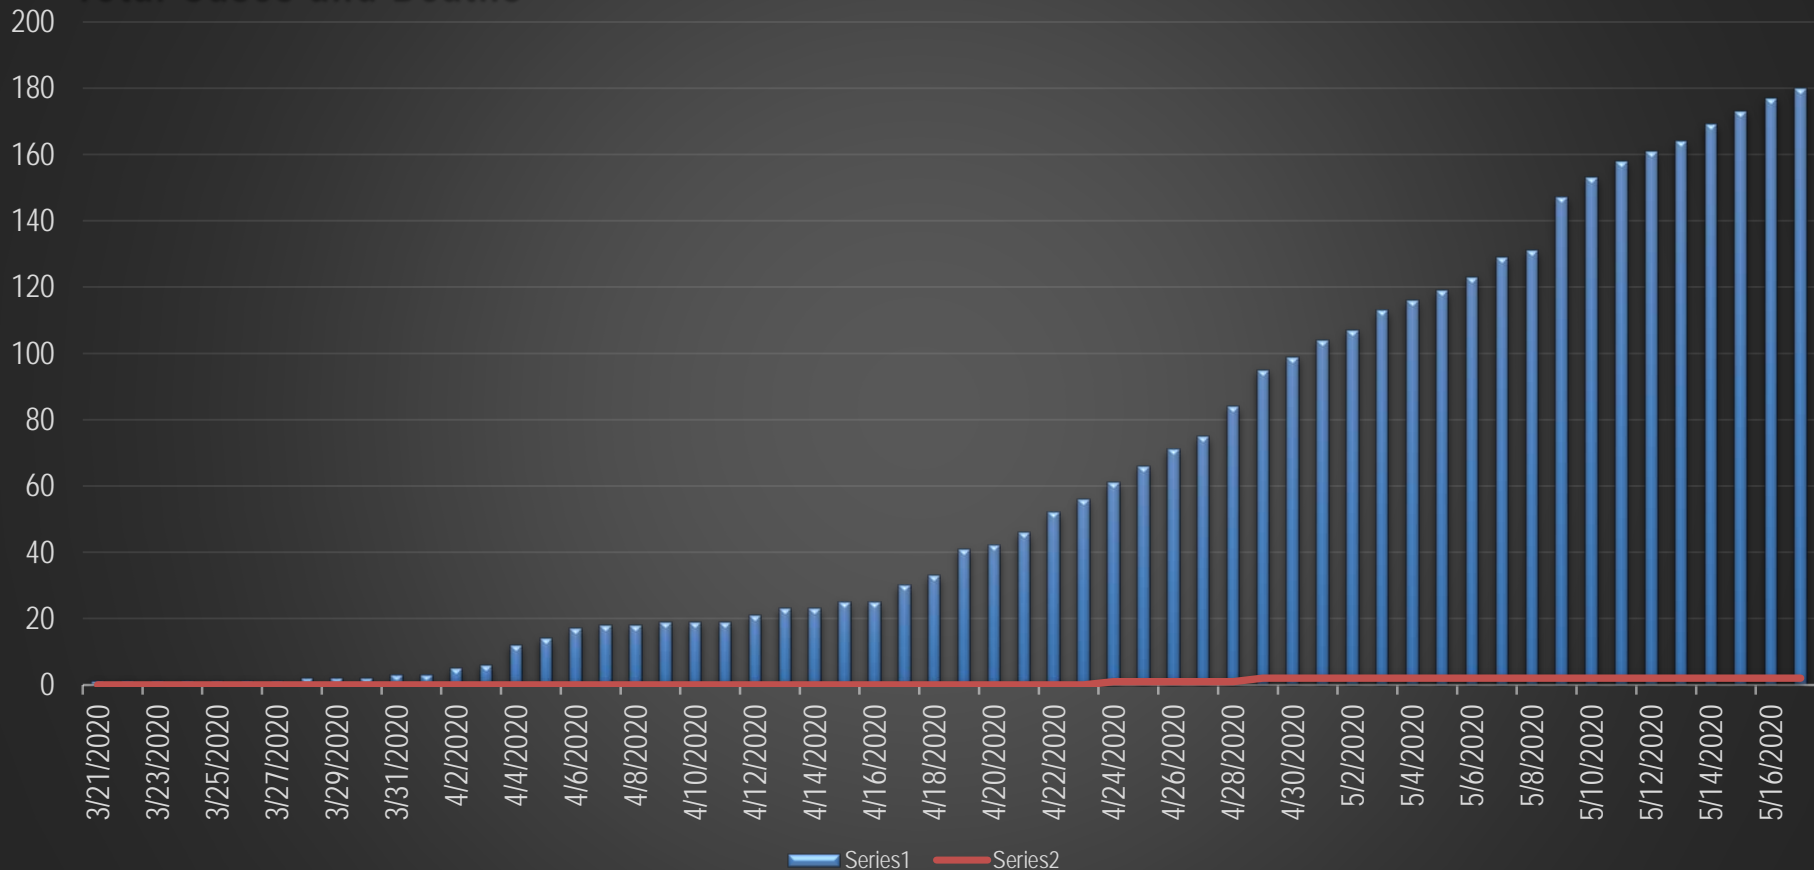

Last updated 5/17/2020. Most experts recommend an infection rate of less than 1.0 for two weeks before reopening. [Learn more about how we calculate infection growth rate here.](#)

Note: As the country continues to learn more about COVID-19, this data will be updated and modified. What is important to note here is the Infection Growth rate is still above 1.0, therefore the spread is continuing

Recommended Testing Strategy for Congregate Settings
updated May 15, 2020

Congregate Settings pose unique challenges related to vulnerable populations and density in housing. The Allegheny County Health Department is providing this guidance to proactively identify asymptomatic cases and contacts to mitigate spread in your setting. In addition to these recommendations, it is also important to have a plan on isolation of positive COVID-19 cases and practice universal screening guidance, social distancing, administrative controls, and enhanced environmental cleaning.

ALLEGAN COUNTY HEALTH DEPARTMENT GUIDANCE ON TESTING

Congregate care settings should test:

- Staff, inmates, and/or residents who are symptomatic.
 - Symptoms include cough, shortness of breath or difficulty breathing, fever, chills, muscle pain, sore throat, new loss of taste or smell.
- Staff, inmates, and or residents who are in close contact to a positive COVID-19 case, if they are not wearing appropriate Personal Protective Equipment (PPE).
 - Wait at least 5 days from known exposure to test individual.

Proactive COVID-19 Mitigation Guidance:

- First step is to baseline test all staff in a facility initially to determine their current COVID-19 status.
 - Test weekly after baseline testing occurred.
 - Consider baseline testing for all residents/inmates.
- Test new youth home residents, new inmates, and new employees as part of the screening on-boarding process.
 - Youth home resident and inmates are to be quarantined until Health Department receives test results. Continue to work with the Health Department on further actions to take.
 - New employees can start work immediately after they get a negative result.

WHO SHOULD PERFORM TESTING

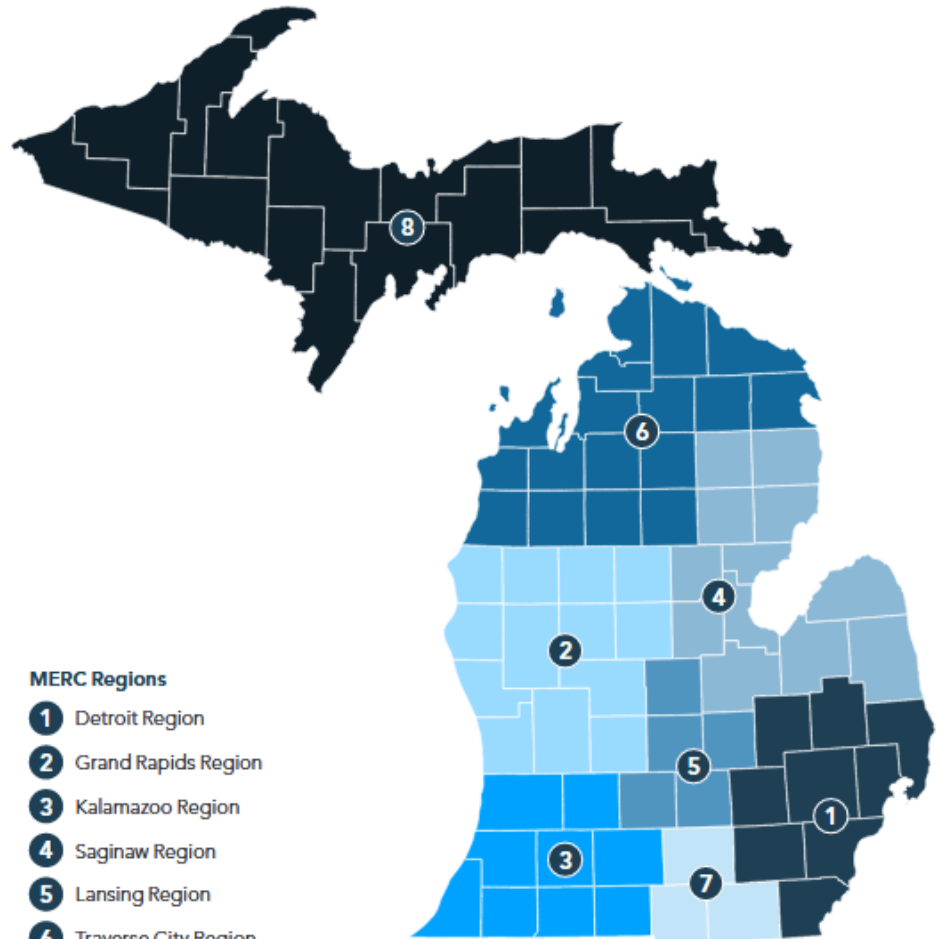

Medical staff from your facility would need to perform the testing. The Allegheny County Health Department will collaborate on information, supplies, and other support as needed.

TESTING SUPPLIES

Numerous venues are available to secure testing supplies.

- State strategy includes congregate care settings securing testing supplies through Regional Homeland Security.
- Testing by State Lab is free currently.
