

Antifreeze

Antifreeze is a mixture of water, coolant, and additives used to protect engines and other equipment from overheating, corroding from freezing in low temperatures. Waste antifreeze if ingested will harm the kidneys, nervous system, lungs and heart.

Household hazardous waste collections occur three times annually, for details visit allegancounty.org/health/recycling-program or contact (269) 686-4559 for an appointment.

Contact your local auto shop for information on acceptance.

Donate it to a friend or community organization. As long as it is in good condition.
