

2020 ANNUAL REPORT

Selkirk Lake Drain

2020 Innovation and Excellence Award

ALLEGAN COUNTY DRAIN COMMISSIONER

County Courthouse

Telephone: 269.673.0440

Fax: 269.673.0396

Email: dmedemar@allegancounty.org

The Allegan County Drain Commissioner is charged with diverse responsibilities as regulated by several public acts:

THE DRAIN OFFICE

The Michigan Drain Code (Act 40 of Public Acts of 1956, as amended) is the law that governs the responsibilities of the Drain Commissioner. The Drain Commissioner, Denise Medemar, and staff are responsible for the operation and maintenance of more than 820 established county drains and storm water management systems in Allegan County. This Act requires strict adherence in regard to mailings, meetings, and public notification.

In 2020, 225 drains experienced activity, ranging from establishing new drains to inspections and routine maintenance of existing drains. Of those 225 drains, 116 drainage districts were assessed. The total amount assessed, \$1,732,013.26, was spread to 33 of the 35 Allegan County municipalities, the County at large and for road benefit, the Michigan Department of Transportation for State Highway benefit, and the railway systems that traverse our County.

The Drain Office provides Payoff Requests for Drain Special Assessments for parcel owners and title companies as well as providing assistance throughout the county on drains and flood complaints. Any flooding situations should be immediately reported to the Drain Office at 269-673-0440. Requests for drain maintenance or improvements should also be directed to this number.

DRAIN MAINTENANCE CREW

The Drain Maintenance Crew consists of a Maintenance Supervisor and a Drain Maintenance worker. The Drain Maintenance worker position was inactive from March to July due to COVID restrictions and vacant from July 27, 2020 forward. Maintenance activities by the maintenance crew include ditch bottom cleaning, tree clearing, debris removal, beaver dam removal, erosion repair, herbicide treatment, and repair of broken pipe on a tile drain. Maintenance is accomplished by using hand tools and small power equipment. In 2020, this form of maintenance was completed on 66 drains.

The Earned Release Program (ERP) and Detail Enabling Better Transition to Society (DEBTS) were initiated by the Sheriff's Department as measures to help address jail overcrowding. In 2020, the Drain Maintenance Crew utilized the DEBTS program and cleaned 17 drains and also provided Storm Inspections. Contractors were hired to clean 49 drains that required larger equipment. Approximately 136 drains in Allegan County and the five

adjacent counties of Barry, Kalamazoo, Kent, Ottawa, and Van Buren were inspected or maintained.

BOARD OF PUBLIC WORKS

The Allegan County Board of Public Works was established and organized under Act 185 of 1957, as amended. In Allegan County the Board of Public Works has seven members that include the Drain Commissioner and six other members appointed by the County Board of Commissioners. The Drain Commissioner is the elected Secretary for the Board of Public Works with Drain Office staff providing administrative support.

The majority of our county's municipal water supply and/or sewage collection and disposal systems were constructed and/or improved using the provisions allowed under Act 185. By utilizing the County's bond rating, a local municipality receives more favorable and affordable financing for these types of public works projects. The County of Allegan/Board of Public Works is the owner of record for the project until the incurred debt is paid in full.

In 2020 there were five active debt service accounts that involved eight municipalities. Debt Service payments are billed to and paid biannually by the affected municipalities. A total of \$995,464.76 in principal, interest, and fees was collected and paid for the year 2020.

INLAND LAKE LEVEL PROJECTS

Part 307 of the Natural Resources and Environmental Protection Act, (Act 451 of 1994), provides for the determination, establishment, and maintenance of the normal height and level of inland lakes in Michigan. Part 307 also requires inspection every three years of all lake level control structures on inland lakes that have normal levels established under this Act. Inspections must be performed by a licensed professional engineer and a copy of the inspection report must be submitted to the Michigan Department of Environment, Great Lakes, and Energy (EGLE).

The County Board of Commissioners delegates administrative duties to the Drain Commissioner to oversee lake level projects and required inspections. Allegan County has six established lake levels: Base Line Lake, Dumont Lake, Miner Lake, Monterey Lake, Osterhout Lake, Pine Creek Lake, and Pine Lake with Barry County. In 2020 there were no Dam Safety Inspections.

INLAND LAKE IMPROVEMENT BOARDS

Part 309 of the Natural Resources and Environmental Protection Act, (Act 451 of 1994), provides for the improvement of certain inland lakes; authorizes the dredging and removal of undesirable materials from lakes; authorizes the payment of improvement costs and related expenses through special assessment to properties within an established district; and specifies the county drain commissioner, or his/her designee, to serve as a member of the lake board.

Allegan County has an established lake improvement board for Gun Lake, Hutchins Lake, Lower Scott Lake and Miner Lake. In Allegan County, lake improvement boards have been established primarily for aquatic plant control and abatement of water quality issues.

GENERAL DEVELOPMENTS

There were 21 General Development plans submitted for Storm Water Management Plan review and approval, at the request of various Townships, as follows:

223 Hubbard St., Allegan
Agri-med Provisioning, Saugatuck Twp
Auto Parts Direct, Overisel Twp
Blue Star Dispensary, Saugatuck Twp
Dollar General, Leighton Twp
Gaslight Estates, Saugatuck Twp
M-40 Crushed Concrete, Fillmore Twp
Multi-Tenant Bldg, Gun Plains Twp
Noah Court, Dorr Twp
Teddy's Transport II, Holland
West Michigan Forklift, Leighton Twp

933 Interchange Drive, Holland
Allegan County Courthouse, Allegan
Black Gold Transport, Dorr Twp
Classic Transport, Leighton Twp
Fennville Pub School Stadium, Fennville
Just a Mere Road, Saugatuck Twp
M-40/143rd Parcel, Fillmore Twp
Newhof Construction, Leighton Twp
Plainwell Middle School Add, Plainwell
Village Self Storage Exp, Fillmore Twp

MOBILE HOME PARKS

Public Act 419 of 1976, the Mobile Home Commission Act, requires that a person who desires to develop a mobile home park shall submit a preliminary plan to the appropriate municipality, local health department, county road commission, and county drain commissioner for preliminary approval. The Drain Commissioner shall review and may approve outlet drainage to ensure that development of the proposed mobile home park does not cause flooding offsite. In 2020, there were no reviews submitted.

SITE CONDOMINIUMS

Act 59 of 1978, the Condominium Act, requires that written notice of intent to construct a condominium project be provided to the appropriate city, village, township, or county, the County Road Commission and the County Drain Commissioner. The Drain Commissioner received two storm water management reviews for 2020:

Boat Slip Condominium, City of Saugatuck
West Center Planned Unit Development, City of Douglas

SUBDIVISION DEVELOPMENT

Public Act 288 of 1967, as amended, the Land Division Act, provides the main regulatory mechanism to ensure that subdivisions meet the standards set by local governmental officials.

The role of the Drain Commissioner under this Act is to ensure that adequate storm water facilities are designed, constructed, and maintained to ensure that landowners within the subdivision are protected from flooding and that the development does not cause an increase in flooding outside of the subdivision.

The Drain Commissioner requires that the plat proprietor/developer provide for adequate storm water facilities. Section 433 of the Michigan Drain Code provides for the construction of a drainage system by the developer to serve a newly established plat and the subsequent establishment of a drainage district in relation to the storm water facility. The drainage system is constructed according to specifications and standards set by the Drain Commissioner. Upon completion, the system can then be remanded to the Drain Commissioner as an established county drain using a formal document known as a 433 Agreement. In 2020, four plat developments were submitted:

Grandview Estates Plat, Wayland Twp Harvest Meadows III/IV, Dorr Twp
Paris Ridge V, Leighton Twp Pearl Street Land Split, Wayland Twp

MS4 PERMIT

In 2016, the Allegan County Drain Commissioner was required to apply for an NPDES Jurisdictional Permit for storm water discharges from a regulated municipal separate storm sewer system (MS4). This permit required the creation of a Storm Water Management Plan composed of six major sections: Public Education Program, Public Involvement and Participation, Illicit Discharge Elimination Program, Post Construction Storm Water Management Program, Construction Storm Water Runoff Control, and Pollution Prevention/Good Housekeeping Standards.

From 2017 to 2020 the Allegan County Drain Commissioner's Office worked with the Macatawa Area Coordinating Council, in coordination with other County Departments, to review and update plan components per MDEQ's initial comments. In 2019, the MS4 permit was submitted to EGLE. As of the end of 2020, the Stormwater Site Development Plan was near completion.

SAW GRANT

In December 2017, the Drain Office received notification that the SAW Grant offered through the Michigan Department of Environmental Quality, which we initially submitted in 2013 with Board of Commissioner approval on Thursday, November 14, 2013, was approved. The amount is \$120,000 which the grant will reimburse ninety percent (\$108,000) with a ten percent local match (\$12,000). The Saw Grant had an end date of December 1, 2020 which was extended to March 31, 2021. The original application provided funding to clean and televise six drains, provide GIS hardware/software training, and records scanning. As of December 31, six drains have been televised and technology decisions have been made.

IMPLEMENTATION PLAN UPDATE**

Communities along the Great Lakes have been dealing with a slow-moving emergency well before the pandemic arrived. Over the past few years, high lake levels and shoreline erosion have threatened public infrastructure, including roads, drain outlets, pipelines, parks, treatment plants, marinas, and water intakes. Lake Michigan water levels have swung from all-time lows in 2013 to record highs set in 2020. This rapid change in lake level has not been seen in the 100-year modern record kept by the Army Corp of Engineers. Lakes Michigan and Huron (considered one lake connected at the Straits of Mackinac) have experienced a 6-foot rise over seven years. Imagine 6-feet of water

over 45,400 square miles! Before this dramatic shift, the lake had been at near-average to below-average levels for 25 years. The latest Army Corps of Engineers forecast predicts the lakes are likely to remain near record levels heading into 2021. The effects of this dramatic rise will be with us for several years to come.

Joe Bush (Ottawa County Water Resources Commissioner) and Denise Medemar (Allegan County Drain Commissioner) know the power of the Great Lakes all too well. Like many County Drain Commissioners and Water Resources Commissioners, they track water levels and rainfall more than most people.

GREAT LAKES EROSION IN ALLEGAN COUNTY

By: Dana R. Burd, P.E. Prein&Newhof

A culvert end section lost to Lake Michigan in Allegan County (Photo by Prein&Newhof)

Michigan is experiencing the wettest 1-year, 3-year, and 5-year periods on record. The effect has been statewide — we are a sponge that has been full for some time. The water table is high everywhere, and many of our major river systems have been experiencing annual flow increases of double to triple their normal yearly flows. Water is everywhere and surging into the Great Lakes.

In December 2019, Allegan County officials met with US Congressman Fred Upton to collaborate on the impact high water was already having on infrastructure and properties along the lakeshore. This meeting included the offices of the Drain Commissioner and Road Commission. Allegan County has several interceptor drains installed

EROSION CONT.

MACDC President Joe Bush and Allegan County Commissioner Jim Storey testify before the Michigan Senate Appropriations Sub-committee in February 2020 on the impacts of high water and erosion. (photo from Joe Bush)

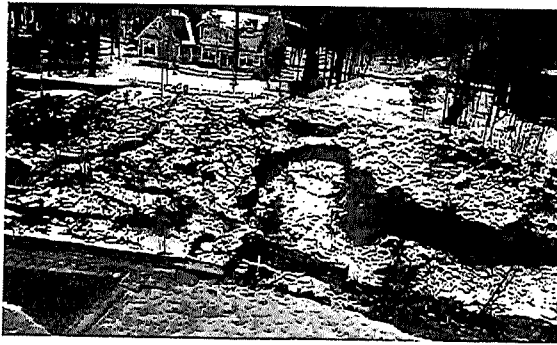

after the previous 1986 high water cycle. These drains run parallel to the lakeshore and function to relieve pressure on unstable bluffs' upper zones. Many of the drains along Lake Michigan have sustained some level of damage from high water, erosion, and accumulated debris. The County also has several areas where public roads and culverts sit precariously close to the unforgiving shoreline.

As President of the Michigan Association of County Drain Commissioners (MACDC), Joe Bush testified before Michigan's Senate Appropriations Committee in February 2020 with officials from Allegan County. Their goal was to further communicate the impacts high water was having on communities across the state. At that time, many forums were being held to build awareness of the ongoing shoreline crisis, including infrastructure impacts. Shortly thereafter, "Rona" entered the room and all focus shifted toward this new crisis. Options for potential state or federal level relief relating to high water and erosion disappeared just as quickly as coronavirus swept into Michigan.

CONTINUED RISE

Between March and June, Lake Michigan continued to rise nearly a foot, breaking July's record. Unstable bluffs continued to erode, pulling down sections of roadway and pipelines along the way.

Debris has continued to damage culverts and outlet pipes. Emergency maintenance and frequent inspections became a regular occurrence throughout the spring and into autumn for the Allegan County Drain Commissioner's office. In some instances, water was temporarily routed away from damaged drains. Denise Medemar's office continues to

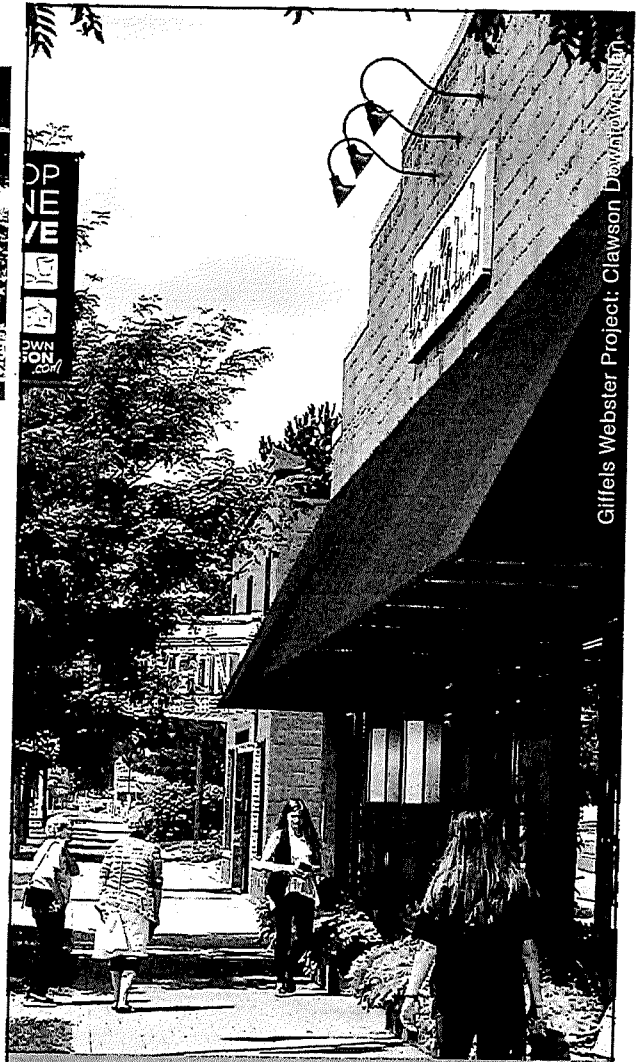

Lakeshore Drain No. 2 has a failing outlet pipe and wood support structure collapsing into Lake Michigan. Allegan County hopes to make repairs in partnership with adjacent property owners working to save their homes. (Photo by Allegan County Sheriff's Office)

respond to emergency repairs and document damages sustained. Planning for long-term repairs is underway but may need to wait until water levels subside. Her office is looking to build partnerships with adjacent property owners, already planning projects to protect their homes near damaged outlets. Rebuilding from the high water period of 1986 took many years, and this cycle will be no different. County Drain Commissioners have an essential role in helping their communities understand the Great Lakes' cyclical nature to plan drain infrastructure and development accordingly.

Many road agencies are also continuing to deal with infrastructure on the edge. The Allegan County Road Commission is working with property owners to maintain a two-mile section of roadway near Saugatuck. Lakeshore Drive is a county primary road that sits on top of a 60-foot bluff. In 1985, a section of road began to fail. By 1986, the road was closed because the land within the right-of-way had disappeared into Lake Michigan. This section of road was never

Allegan County Road Commission crews work to maintain access to homes by shifting Lakeshore Drive further inland within the right-of-way. (Photo by Prein&Newhof)

LAKES MICHIGAN-HURON WATER LEVELS - NOVEMBER 2020

Army Corp of Engineers 6-month Lakes Michigan-Huron Forecast Graphic shows water levels will remain at or near recorded high heading into 2021.

rebuilt and has remained a dead-end for the last 35 years. More recently, a nearby section of Lakeshore Drive was closed for several months when a large sinkhole developed along the unstable bluff. For a time, residents did not have access to their homes.

Temporary repairs were made to shift the road further inland, but the long-term fate of the road itself remains in question. Studies are underway to evaluate alternatives to protect the road in place or plan for its eventual retreat inland.

HOW LONG WILL THIS CYCLE LAST?

Fall and winter is typically a period of seasonal decline for the Great Lakes. Last year, that decline never happened. Levels held steady from September through April. Temperature, evaporation, and precipitation will be significant factors in determining if water levels will trend downward over the next several months. Heading into spring of 2021, the Army Corp predicts the best-case scenario is Lake Michigan-Huron will remain several feet above the long-term average. It will take several years and a few dry years before lake levels are closer to "normal".

History has shown that the Great Lakes experience a general rise and fall over decades. The current cycle has been the most rapid rise on record and followed a prolonged low water period. The change has taken many people by surprise. The shoreline is a dynamic system. This is certainly not the first time lake levels have been this high, nor will it be the last.

Before 1986, Lake Michigan-Huron had high and low trends every few decades. Lesser spikes and dips occurred every 5-10 years within those general trends. The official period of record only goes back 100 years, but the Great Lakes have been in their current configuration for much longer - around 3,000 years.

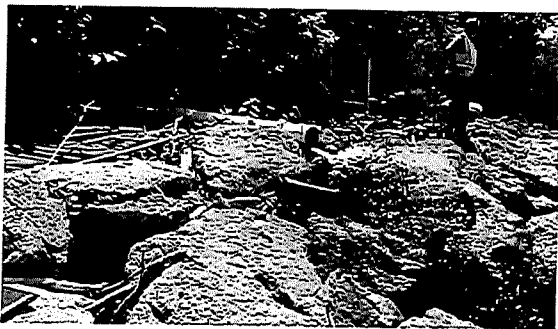

A major consideration with each new cycle is more development along the coastline. People want to live near the water. Ottawa County is one of the fastest growing counties in Michigan. Allegan County is not far behind. Over the past 35 years many large homes have been built along the shore where small cottages once stood. Wooded areas and fields have become developments. With growth comes infrastructure. Community leaders, engineers, and planners

will have to learn from the outcomes of this high water period and become more resilient for the next cycle. As time passes communities are learning more ways to adapt and manage the changing coastal environment.

Some State and Federal programs are available to assist communities with understanding and responding to high water and erosion impacts. Still, as with all emergencies – they begin and end at the local level. Counties managing infrastructure challenges should reach out to their Emergency Management Teams, who can play an essential role in planning and communicating the effects of high water and erosion in their communities.

The Coastal Management Program at the Michigan Department of Environment, Great Lakes, and Energy (EGLE) has programs available to encourage resiliency planning for coastal communities. FEMA has the Building Resilient Infrastructure and Communities (BRIC) Program to support states and local communities with hazard mitigation efforts. Lastly, the Superior Watershed Partnership has made available the Great Lakes Shoreviewer — a risk assessment, and climate adaptation planning tool available at www.greatlakesshoreviewer.org. These resources indicate a growing awareness and response at all levels of government for risk mitigation that emphasizes proactive planning over reactive responses to future crisis.

Our Great Lakes coastline is a powerful and dynamic resource. Understanding its changing nature will help guide current and future decision-making. Being aware of the impacts

Brent Scholten, Drain Maintenance Supervisor for Allegan County, stands atop a revetment built by the Army Corp of Engineers in the 1970's. The outlet to Lakeshore Drain No. 1 is one of several drains constructed in the 1990s in part to relieve pressure on the upper zones of unstable bluffs. (Photo by Prein&Newhof)
